IB programmes in Title I schools in the US
Access to IB programmes

- 60% of all public schools that offered IB programmes in the US (2012-2013) were designated Title I.
College enrollment outcomes

• DP students from Title I schools enroll in college at much higher rates than the national averages.
College enrollment outcomes

- Low-income African American DP students from Title I schools have the highest college enrollment rate among the racial/ethnic groups examined in this study (84%), while nationally the college enrollment rate of African American students is the lowest (57%).
Key points

• IB programmes have a substantial presence in Title I schools.
• Race/ethnicity and income of an IB student has limited effects on his or her college enrollment.
• African American DP students from Title I schools have the highest postsecondary enrollment rate among the racial and ethnic groups in this study.
